Product features

- Energy saving
- Comfort increasing
- Long lifespan
- High quality
- Compact
- Quiet
- Equipped with controller

A comfortable temperature for every home

The Mark COMFORT LINE water-supplied air heaters are specially designed for optimal and energy efficient heating of homes. The unit can be used in combination with a combi boiler and/or heat pump. The air heater is also dimensioned in such a way that it is very suitable for renovation.

The COMFORT LINE ensures recirculation, filtering and heated supply of the air in a building or home. This allows all rooms to be heated quickly and comfortably.

In addition to homes, the COMFORT LINE can also be used in shopping centers, offices, churches and school buildings.

The COMFORT LINE air heaters are fitted with EC motors as standard. Benefits:

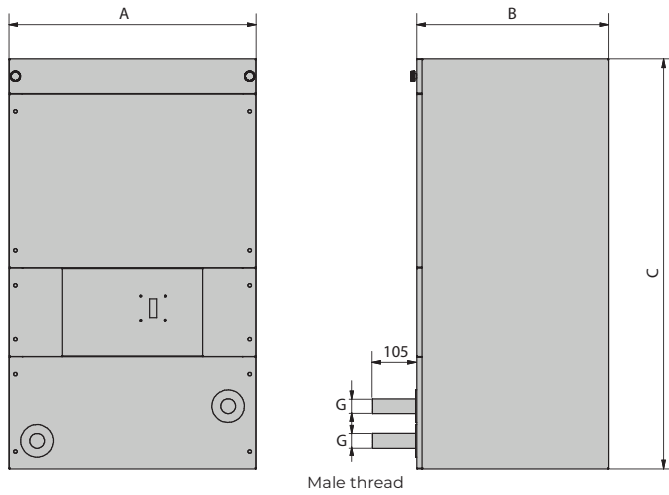

- Highest efficiency with speed control
- Up to 50% energy savings at partial load
- Almost linearly adjustable from 0-100%
- Long lifespan
- Quiet
- Integrated electronic protection against overheating

Controller

Every COMFORT LINE is supplied with a controller as standard. This user-friendly and easy-to-operate control ensures perfect and worry-free operation.

Each controller is equipped with a pipe surface temperature sensor. The COMFORT LINE fan speeds up or down depending on the water temperature.

Dimensions

Type	A	B	C	G
8-12	570	442	945	1"
18-24	670	612	945	1"
28	670	612	945	1"
32	670	612	945	1"
